Mean 19.929; Variance 62.491; scale 0.319 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RESULT 1 ID D80902 standard: protein: 19 aa		_	_	Homo sapiens.	FT disulfide_bond 218	n)	FT /label-OTHER	FT /note="Further peptide fragment of ANF/CDD 1-126	FT misc_difference 19	FT /label-OTHER	FT /note="As above"	PN W08806596-A.	PD 07-SEP-1988.	PF 27-FEB-1988; E00144.	PR 09-DEC-1987; DE-741641,	PI Forssmann WG, Becker G, Herbst F;	DR WPI; 88-271140/38.		PS Claim 1; Page 24; 42pp; German.	CC It has the AA sequence 95-126 of ANF/CDD 1-126 (gamma-hANaP). It may be	CC isolated from human urine by adsorption with alginic acid. It may also be	CC synthesised or prepd. by fragment synthesis, e.g. using ANF/CDD 99-126	CC and the tetrapeptide Thr-Ala-Pro-Arg. It can be used in differentiated	CC vasodilation diagnostics and therapy of hypertonia, application as a	CC substn. for patients which have been implanted with artificial hearts &	CC synchronous regulation of blood volume and electrolytes of the blood. It		CC differential diagnostics of endothelial changes.

Probes were derived by assuming conservation between human atrial
and porcine brain natriuretic peptide, and used to isolate the pBNP gene.

Disclosure: Column 49: 45pp; English.
The sequences given in R40387-748 are atrial natriuretic/
vasodilator peptide (ANVP) cDNAs. These ANVP fragments may be used for regulation of fillid volume and blood pressure in host organisms.
These ANVP fragments may be produced by solid-phase techniques. See also R36937-78.

Human Atrial Natriuretic Polypeptide analogue - having strong diuretic,
   Human Atrial Natriuretic Polypeptide analogue.
Human atrial natriuretic polypeptide; hypotensive; diuretic; beta-LANP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure; Column 49; 45pp; English.
The sequences given in R40387-748 are atrial natriuretic/
vasodilator peptide (ANVP) cDNAs. These ANVP fragments may be used for regulation of fluid volume and blood pressure in host organisms.
These ANVP fragments may be produced by solid-phase techniques. See also R36937-78.
                                                                                                                                                                                 natriuretic and hypotensive action.

Claim 1; page 2; 20pp; English.

This sequence differs from that of natural human atrial natriuretic polypeptide (hAMP) in that the N-terminal 6 residues are deleted. It is present in dimeric form and is useful as a diuretic, natriuretic or hypotensive. It has an application in the treatment or prevention of e.g. cardiac cedema or malignant hypertension.

It is an intermediate for the synthesis of beta-LAMP or analogues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This represents a human alpha atrial natriuretic peptide sequence (alpha-hANP). The invention provides a composition for treating cardiac diseases associated with cardiac hypertrophy. The composition comprises an active ingredient capable of binding to the peptide receptor of GC-A and promoting production of cGMP. The drug composition may be used cilically to treat cardiac diseases caused by cardiac hypertrophy, including chronic heart failure, ischeamer cardiac diseases and arrhythmia. The active substance can bind to the natriuretic peptide receptor of GC-A and promote production of cGMP, effectively preventing cardiac hypertrophy and leading to improvement of the pulmonary blood circulation. The substance does not affect haemodynamic properties, blood pressure, heart beat and urine volume.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    28-OCT-1998 (first entry)
Alpha human atrial natriuretic peptide (alpha-hANP) 2 (residues 7-28).
ANP: atrial natriuretic peptide: cardiac disease; cardiac hypertrophy; chronic heart failure; ischaemic cardiac disease; arrhythmia; cGMP; pulmonary blood circulation; haemodynamic property.
                                                                                                                                                       Disclosure: Column 9: 45pp; English.

The sequences given in 840387-748 are atrial natriuretic/
vascollator peptide (ANVP) cDNAs. These ANVP fragments may be used for regulation of fluid volume and blood pressure in host organisms.

These ANVP fragments may be produced by solid-phase techniques. See also R36937-78.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New polypeptide con. - useful as natriuretic, diuretic and/or vasodilator in mammals
Disclosure; Column 49; 45pp; English.
The sequences given in R0387-748 are atrial natriuretic/
vasodilator peptide (ANVP) cDNAs. These ANVP fragments may be used for regulation of fluid volume and blood pressure in host organisms.
These ANVP fragments may be produced by solid-phase techniques. See also R36937-78.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          vasodilator in mammals

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polypeptide con. - useful as natriuretic, diuretic and/or vasodilator in mammals. Disclosure; Column 29: 45pp; English. The sequences given in R0387-748 are atrial natriuretic/vasodilator peptide (ANVP) cDNAs. These ANVP fragments may be used for regulation of fluid volume and blood pressure in host organisms. These ANVP fragments may be produced by solid-phase techniques. See also R36937-78.

Aldosterone inhibiting polypeptide - for controlling aldosterone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     P71467 standard; peptide; 25 AA.
P71467;
25-APR-1991 (first entry)
Sequence of aldosterone inhibiting polypeptide,
[desArg32]-hAPR(8-33).
Aldosterone dependent hypertension; atrial peptide; natruretic;
diuretic; smooth muscle relaxant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

The sequences given in R40387-748 are atrial natriuretic/
vasodilator peptide (ANVP) cDNAs. These ANVP fragments may be used
for regulation of fluid volume and blood pressure in host organisms.
These ANVP fragments may be produced by solid-phase techniques. See
also R36937-78.

The sequences given in R40387-748 are atrial natriuretic/
vasodilator peptide (ANVP) cDNAs. These ANVP fragments may be used
for regulation of fluid volume and blood pressure in host organisms.
These ANVP fragments may be produced by solid-phase techniques. See
also R36937-78.

regulation; fluid volume; blood pressure.
                          Aldosterone secretion is inhibited by the administration of a peptide of the invention and its addition salt. It is used for treatment of aldosterone dependent hypertension. Atrial peptides have matruretic, diuretic and smooth muscle relaxant activities. Sequence 25 AA;

The sequences given in R40387-748 are atrial natriuretic/vasodilator peptide (ANVP) cDNAs. These ANVP fragments may be used for regulation of fluid volume and blood pressure in host organisms. These ANVP fragments may be produced by solid-phase techniques. See also R36937-78.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

"Structure of dog and rabbit precursors of atrial natriuretic
polypeptides deduced from nucleotide sequence of cloned cDNA.";
BIOCHEM. BIOPHES. ESC. COMMUN. 132.892-899(1985).
-: FUNCTION: ATRIAL NATRIUETIC FACTOR (ANF) IS A POTENT VASOACTIVE
SUBSTANCE SYMPHESIZED IN MAMMALIAN ATRIA AND IS THOUGHT TO PLAY A
KEY ROLE IN CARDIOVASCULAR HOMEOSTASIS. HAS A CGMP-STIMULATING
ATRIAL NATRIURETIC FACTOR PRECURSOR (ANF) (ATRIAL NATRIURETIC PEPTIDE)
(ANP) (PREPRONATRIODILATIN).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ATRIAL NATRIURETIC PEPTIDE, ALPHA (ANP)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                   Biologically prepared peptide -
has vein relaxation activity.

Claim 1; page 1; 13pp; Japanese
This sequence as isolated from human heart. Sequences complementary
to the DNA encoding MDRIG of cardionatrin were isolated using
a mixture of oligonucleotide probes. Two plasmids, phavD and phMANF,
identified by this screening process, were then used to transform
Sequence 125 AA;
                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NP-SDB; N50055.

New DNA sequences from human atrium cordis - coding for new diuretic polypeptide or precursor cpds.

Claim 26; Page 37: 53pp; English.

The precursor of human gamma-ANP and its 26Asn-151Tyr fragmentare claimed (P50036, P50037), as are the DNA SQs encoding them (N50020, N30055). The 26Asn-151Tyr fragment has a diuretic action so is useful as a hypotensive/antihypertensive agent. The usual dose is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                              ö

peptide fragment of hypertension and related disorders - with synthetic peptide fragment of atrial natriuretic factor pro:hormone Disclosure; Column 4: 19pp; English.

Disclosure; Column 4: 19pp; English.

This sequence represents the human atrial natriuretic factor prohormone (proANF). Fragments of this sequence (see W34521-W34523) can be used in the method of the invention. The method is for treating hypertension, congestive heart failure, pulmonary odedma, toxaemia of pregnancy, nephrotic syndrome, acute and chronic renal failure or hepatic cirrhosis with or without ascites comprises administering a synthetic peptide with or without ascites comprises administering a synthetic peptide with or without ascites comprises administering a synthetic peptide constitution and proANF(1-30) and proANF(1-30) and also be used in a method for treating hyperkalaemia associated with acidosis, digitalis overdose, succinylcholine, insulin deficiency, acute or chronic renal failure, duretic, natriuretic and/or kaliuretic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    of pregnancy;

New atrial polypeptide cpds. - useful as natriuretics,
diuretics, vasodilators and modulators of the
renin anglotensin aldosterone system
Sequence of pre-pro-atrial natriuretic/vasodilator polypeptide (ANVP).
Natruiretic; duiretic; vasodilator; venin-angiotensin-aldosterone-system.
                                                                                                                                                                                                                                                                                                                                                                            Sequence of pre-human atrial natriuretic peptide.
Human-chANP; diuretic; antihypertensivity; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /note= "encoded by N50763"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .T

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Disclosure; Fig 1B; 45pp; English.
This sequence is encoded by the human pre-pro atrial natriuretic/
vascallator peptide (ANP) cDNA. Fragments of this protein and the
corresponding sequence in rat (see also R36936), may be used for
regulation of fluid volume and blood pressure in host organisms.
The ANVP fragments may be produced by solid-phase techniques. See
also R36937-78.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 vasodilator polypeptide (ANVP), pro-ANVP or pre-pro-ANVP, or their fragments. The encoding DNA sequence is also claimed. The claimed polypeptides are natriuretics, diuretics, vasodilators and modulators of the renin-angiotensin-aldosterone system. Dose is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; pre-pro; atrial natriuretic/vasodilator peptide; ANVP; rat; regulation; fluid volume; blood pressure.

Matsuo H, Kangawa K, Hayashi Y, Oikawa S, Oshima T, Tanaka S, Wakazato H, Tawaragi Y; Tanaka S, Wakazato H, Tawaragi Y; Tanaka S, Wakazato H, Tawaragi Y; MwP1: 85-312162/50.

New DNA sequences from human atrium cordis - coding for new odiuretic polypeptide or precursor cpds.

Claim 25; Fig 5; 53pp; English.

The precursor of human gamma-ANP and its 26Asn-151Tyr fragmentare claimed (P50036, P50037), as are the DNA SQs encoding them (N50020, M50055).

W50055). The 26Asn-151Tyr fragment has a diuretic action so is useful as a hypotensive/antihypertensive agent. The usual dose is
  Genetic analysis diagnostic for hypertension - by detecting polymorphous of the renin, kallikrein or ANF gene regions bisclosure; Fig 2: 51pp; English.

The patent application is for a method used for determn. of a genetic fingerprint of a subject which allows early diagnosis of individuals at risk of hypertension and permits early therapeutic measures to prevent the fatal symptomology of the disease. The section of the genome which is fingerprinted or otherwise subject study using the results is dependent on the nature of the probestudy probes useful in the present invention are selected from the renin, kallikrein, or ANF gene (see FT).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cardiodilatin, peptide.
Cardiodilatin; plasmid pHANF48; muscle relaxant; antihypertensive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 P50036;
03-SEP-1991 (first entry)
Sequence of the precursor of human gamma-atrium natriuretic
polypeptide (ANP).
Natriuretic; diuretc; hypotensive; antihypertensive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Score 101; DB 3; Length 151;

Claim 7; Page 115; 144pp; English.
The inventors claim a polypeptide comprising atrial natriuretic/
vasodilator polypeptide (ANVP), pro-ANVP or pre-pro-ANVP, or their
fragments. The encoding DNA sequence is also claimed. The claimed
polypeptides are natriuretics, diunetics, vasodilators and
modulators of the renin-angiotensin-aldosterone system. Dose is

                                                                           corresp. DNA sequences, useful as antihypertensive agents.
Disclosure; Fig. 13: 45pp; English.
The DNA encoding the cardiodilatin is carried on plasmid pHANF48.
Cardiodilatin is a muscle relaxant, so is useful as an antihypertensive agent. The DNA is obtd. from RNA isolated from the human heart.
Sequence 151 AA;
